

Monitoring practice

Step 1

Create two virtual machines. You host should have access to these machines. They should be able to communicate together.

Step 2

On virtual machine 1 :

- Add the official repositories
- Install mySQL
- Install Zabbix server
- Install Zabbix php frontend
- Configure the database
- Configure the server

On virtual machine 2 :

- Add the official repositories
- install Zabbix agent

Step 3

- Add a host for machine 2
- Add it to the linux model
- Create a screen for this host with memory, network and CPU

Step 4

- Add an alert on ping

Step 5

- Add a custom element
- And graph it
